VISHAL RAJ

Analytics Manager

00vishalraj99@gmail.com | +91 73887 10110 | linkedin.com/in/vishalraj13 | Bangalore, India

PROFESSIONAL SUMMARY

Analytics Manager with 8+ years of data science experience across fintech, payments, and consumer technology. Has led cross-functional teams, shipped analytics tools built on large language models (LLMs) into production, and driven measurable impact in every role: from halving payment rejection rates at a Singapore fintech to growing monthly transacting users by 24% at a payments infrastructure company. Comfortable in a SQL editor and in a C-suite review. Now seeking a senior analytics or data science role in the UK.

EXPERIENCE

Analytics Manager

Aspire | *Singapore (Remote)* | *Payments & Fintech* | April 2026 - Present

- Built ARES, an in-house LLM analytics assistant that generates SQL from plain-English questions, runs queries against the data warehouse, and returns results with charts. Saved US$5,000/month in Databricks Genie costs and cut team-wide ad hoc data requests by 80% per week.
- Reduced cross-border payment delay rate from 12% to 8% in a single quarter by mapping service level agreement (SLA) bottlenecks across payment types and currency corridors, then working with the FinRisk team to overhaul their transaction quarantine process.
- Lowered payment rejection rate from 3% to 1.4% by tracing rejection codes across banking partners and identifying payload engineering gaps, including a Singapore/Hong Kong address field mismatch that was silently failing inbound transactions.
- Lead a six-person analytics team across Singapore, Hong Kong, the US, Australia, Vietnam, and the UK supporting FX, Cross-Border, and Local Payments, keeping data request turnaround under 3 days.

Senior Analytics Specialist

Razorpay | *Bangalore, India* | *Payments Infrastructure* | November 2024 - April 2026

- Deployed an LLM-powered ticket routing agent that categorised and assigned merchant support cases automatically, cutting 90th-percentile resolution time from 5 working days to 2 and lifting net promoter score (NPS) from 52% to 64%.
- Grew monthly transacting users by 24% (62,000 to 78,000) by overhauling top-of-funnel conversion, working across product and commercial teams to identify and remove document friction and process gaps.
- Identified cross-functional referral opportunities by building a supervised machine learning model, with LLM tooling, that analysed merchant website behaviour, generating 300 new merchant sign-ups per month and adding £20,000 in monthly recurring revenue.
- Reduced data delivery turnaround from 2-5 days to 1-3 days by building automated Tableau dashboards and Slack-delivered scorecards, removing routine reporting dependency on the analytics team.

Senior Manager, Analytics

Airtel | *Gurugram, India* | *Telecoms & EdTech* | May 2024 - November 2024

- Led a team of six analysts and two data engineers, building extract, transform, load (ETL) pipelines and reporting infrastructure for the CEO's office with a 1-3 day SLA for analysis and 3-5 days for pipeline and infrastructure work.
- Built a real-time app error monitoring dashboard with automated JIRA ticket creation via Python, so that 80% of post-launch bugs were triaged and resolved within 5 business days.
- Instrumented front-end event tracking across the full acquisition funnel and built user activity scorecards, lifting visit-to-sign-up conversion from 40% to 79%.
- Ran A/B experiments across user cohorts and communication channels, finding WhatsApp as the highest-converting channel and raising click-to-sign-up from 3% to 8% for the general cohort and 12% to 20% for high-value users.
- Introduced customer success SOPs and a ticket tagging taxonomy using Freshworks, achieving 80% resolution of general enquiries within 2 days and technical issues within 5 days.

Data Analyst

Zet | *Bangalore, India* | *Fintech Lending* | November 2022 - April 2024

- Improved loan application funnel conversion from 4% to 7% by re-engineering supervised machine learning credit risk models through feature engineering and refining credit line recommendations using bureau data.

- Facilitated 50,000+ loan disbursals in 12 months by profiling pre-qualified user segments and running a joint pre-approval campaign with non-banking financial company (NBFC) partners.
- Designed a tiered agent loyalty programme, raising commissions by 5% for agents completing five or more loans monthly, which drew agents from competitors, raised average revenue per agent by £30 a month, and added £120,000/month in net revenue across roughly 4,000 active agents.
- Sustained approximately 10% monthly top-of-funnel growth (quarterly average) by building richer cohort models that surfaced clear acquisition patterns for the commercial team.

Data Analyst

Relevel by Unacademy | *Bangalore, India* | *EdTech* | April 2022 - November 2022

- Cut ad hoc data requests by 40% within a single two-week sprint by building self-serve analytics dashboards, freeing the team for higher-value analytical work.
- Delivered data requests for Engineering, Ops, and Growth within a 3-5 day SLA, working across PostgreSQL, Python, Tableau, and AWS Redshift.

Business Analyst

Newton School | *Bangalore, India* | *EdTech* | May 2021 - March 2022

- Scaled the data function from 2 to 11 people in 8 months and established delivery standards that met 70% of cross-functional data requests within 2 business days.
- Drove quarterly business growth from 8.2% to 13% by redesigning the admissions funnel using A/B testing, cohort analysis, and revised SOPs across Marketing and Admissions.

Associate, MIS & Reporting

Tech Mahindra | *Noida, India* | *Client: Vodafone Qatar (Telecoms)* | March 2020 - April 2021

- Produced and maintained MIS reporting packs for senior leadership, keeping a 3-5 day data turnaround across multiple business units.

Sales Associate (Intern)

BYJU'S | *Lucknow, India* | *EdTech* | November 2019 - March 2020

- Generated £6,500 in sales over the three-month internship, around £2,000 a month, by selling BYJU'S online learning programmes at an average ticket size of £190.

Business Analyst

Amazon | *Hyderabad, India* | *E-commerce Logistics* | June 2018 - November 2019

- Cut delivery time by 10% and total monthly returns by 30% by correcting map coordinates for over one million North American delivery addresses, which raised the number of deliveries completed each day.
- Cut the monthly value of returns caused by wrong addresses or lost packages by 10% by writing a Python natural language processing (NLP) script for the Proof of Delivery programme that read customer feedback and raised a ticket for every wrong-delivery complaint.

SKILLS

Technical: SQL (PostgreSQL, MySQL, BigQuery, Trino, MSSQL), Python (Pandas, NumPy, Matplotlib, Scikit-learn), AWS (S3, Lambda, Glue, EC2, RDS, CloudWatch), Databricks, Airflow, dbt, Git

Visualisation & Tools: Tableau, Power BI, Looker Studio, Metabase, Mixpanel, Amplitude, Firebase, Google Analytics, MicroStrategy, JIRA, Confluence, Freshworks, Notion

Data Science & Analytics: Machine Learning (Supervised Learning), LLM Development, Prompt Engineering, NLP & Text Classification, Credit Risk Modelling, Feature Engineering, A/B Testing, Cohort Analysis, Funnel Analytics, Statistical Modelling, ETL Pipeline Development

Domain & Leadership: Cross-border Payments Analytics, Stakeholder Management, Team Leadership, Agile, Root Cause Analysis, Forecasting, Business Intelligence, Data Governance (GDPR)

EDUCATION

Bachelor of Technology, Information Technology

Inderprastha Engineering College, Ghaziabad, India | 2014 - 2018
